Standard Unit Codes4

Standard Unit Codes

The Standard Unit Codes were developed due to a need to more readily analyse treating doctor unit/specialty information across all hospitals.

For Public Hospitals mapping is to be done on a 'best fit' by the hospital, i.e. that unit that best reflects the hospital unit's activity. There is no requirement for hospitals to further split their own units to match the standard set listed below. The mapping will be parameterised in HQI. It is expected that smaller hospitals will not manage separate specialty units, but rather will use the general medical or surgical codes.

Please advise Statistical Collections and Integration Unit (SCIU) of unit codes that are not able to be mapped to the categories below.
