

New health services are now available in store

Our pharmacists can now offer consultations to help you manage:

- a range of health conditions (e.g. reflux, ear infections, vomiting, hay fever, shingles and acne)
- hormonal contraception
- acute minor wound management
- wellbeing services (e.g. weight management, quitting smoking and oral health)
- certain chronic conditions.

Participating pharmacists have completed additional clinical training to provide these new services.

Availability of pilot services may vary between participating pharmacies and pharmacists

What will these services cost you?

Consumers must pay all costs associated with the service. This means the cost of your consultation and any additional costs are:

- **not eligible** for a rebate under Medicare
- **not subsidised** by the Pharmaceutical Benefits Scheme (PBS).

Consultation fees range between \$18.85–\$68.10 depending on the service provided.

Additional costs associated with the service include any items used during the consultation and as part of ongoing care (e.g. medications, pathology tests, bandages).
